[LinkedIn](#) | [Github](#)

Full-stack developer with more than 2 years of experience, creating and maintaining services on an e-commerce platform. Looking to join a young, agile company where teamwork and good communication are valued. Throughout these years working as a developer I have been able to be part of large projects, taking the requirements of our clients and transferring them to the software design; In addition to enriching and improving my communication skills, task organization and self-learning.

TECHNICAL SKILLS.

Javascript	React	Redux	Vue.js
Golang	Ruby	Ruby on Rails	Rspec
Redis	RelationalDatabases	Nodejs	Microservices
API design	OOP	Go	English

PROFESSIONAL EXPERIENCE

Bootic - Ecommerce platform

01/2021 - 01/2022

Lead developer

- Developed an application that allows you to request shipments with up to 9 different couriers. This implementation also allows us to obtain the status of the shipment and deliver this status through REST-API to centralize the follow-up queries in this application.
- Developed an application that allows integration with some messaging media such as WhatsApp, telegram, or SMS. This application makes available an endpoint for importing a JS library written by me that creates a widget like tawk.to to be used in different places of the Bootic infrastructure. Use Redis to manage message queues asynchronously and webhooks for sending and receiving messages in real-time.
- Made a script that scraped a postgraduate platform obtaining more than 150,000 postgraduate programs using selenium and httparty. With these programs, I designed a database and served them through API-REST according to business logic

Higia - Platform for psychological consultations.

09/2020 - 12/2021

Trainee Full-stack developer

- I worked on maintaining the monolith and did unit and feature tests.

EDUCATION

Codeable | www.codeable.pe

Lima, Perú
